

## RMC MOWING GUIDELINES

Mowing is done on the approximately 20 miles of roads in Kenmure during the mowing season, usually from mid-April to early October. The grass is mowed on the right-of-way 6 to 8 feet from the edge of the pavement, where possible. Mowing is not done on owner-improved right-of-ways.

While all of Kenmure is usually on a three-week interval mowing schedule, the RMC representative responsible for scheduling mowing has the flexibility to increase or decrease that interval, dependent on rate of grass growth, which is influenced by rainfall, temperature, sun and canopy cover in various regions of Kenmure. The RMC representative also has the flexibility to schedule different mowing intervals for specific sections of Kenmure, dependent on rate of grass growth.

Mowing should not be scheduled on Mondays, to avoid conflict with garbage collection.

The RMC representative contacts the mowing contractor to schedule each mowing. Mowing usually takes two rain-free days for each mowing for all of Kenmure.
